SUMMARY

Senior Backend Engineer with 7+ years building and scaling distributed, event-driven systems on AWS using Node.js, TypeScript, and PostgreSQL. Strong ownership across the full SDLC including system design, secure REST/GraphQL APIs, CI/CD, and production reliability, with experience leading teams and productionizing LLM/AI-agent workflows.

SKILLS

Languages: TypeScript, Node.js, Python, JavaScript
Backend: REST, GraphQL, Event-Driven Architecture, Microservices, Distributed Systems, System Design, PostgreSQL
AWS: Lambda, EventBridge, SQS, API Gateway, S3, CloudFront, Route53, IAM, Cognito, CloudFormation
DevOps: Docker, Kubernetes, Terraform, GitHub Actions, CircleCI, Git, CloudWatch, Prometheus, Grafana
Testing: Jest, Unit Testing, Integration Testing, Test Automation
AI/ML: LLM Integration, AI Agents, MCP, Claude Code, Developer Tooling & Plugins
Methodologies: Agile, Scrum, TDD

EXPERIENCE

Treez Inc. Mar 2022 to Present
Software Development Engineer II

- Architected and led development of a Retail AI Platform automating invoice processing and catalog onboarding for retailers. Designed the end-to-end event-driven microservices architecture on AWS and led a backend team of 6 engineers through system design, technical planning, implementation, and production rollout.
- Designed and productionized an asynchronous workflow orchestration framework coordinating AI agents and backend services using EventBridge, SQS, idempotent consumers, distributed state management, and DLQ-based recovery, reducing workflow failures by ~40% and improving reliability of long-running processes.
- Built and scaled a serverless Product Collection Service processing 50K+ events per day on AWS Lambda and PostgreSQL, achieving 99.9%+ processing reliability through retry strategies, dead-letter handling, and fault-tolerant distributed design.
- Integrated LLM-powered product description generation, document processing, and vision-based image discovery into catalog onboarding pipelines, enabling enrichment for thousands of SKUs, reducing manual onboarding effort by ~60%, and cutting product publishing time from days to a few hours.
- Developed an internal Event Registry platform that evolved into shared infrastructure across 10+ microservices, introducing centralized schema management, contract validation, and event discoverability, reducing integration-related production issues by ~30%.
- Implemented enterprise authentication and authorization using AWS Cognito, SSO, OAuth 2.0, and RBAC, designing invitation, tenant management, and role-switching workflows for secure multi-tenant access control.
- Built and shared internal Claude Code skills and plugins adopted across the org for local service setup, debugging, pod log retrieval, and database investigation, cutting developer setup and troubleshooting time and standardizing engineering workflows team-wide.

Diagnal Technologies May 2019 to Feb 2022
Software Development Engineer

- Developed and maintained serverless backend systems for 3 OTT platforms serving peaks of ~500 requests per second during content launches, using AWS Lambda, API Gateway, DynamoDB, and GraphQL.
- Built REST and GraphQL APIs supporting content delivery, CMS workflows, and user authentication.
- Automated build, testing, and deployment workflows through GitHub Actions and CircleCI, enabling reliable zero-downtime production releases.
- Collaborated directly with clients to gather requirements, estimate engineering effort, and translate business needs into scalable backend solutions.

EDUCATION

M.Tech Robotics and Automation, Amrita School of Engineering, 2019
B.E Mechatronics Engineering, Nehru Institute of Engineering and Technology, 2016

CERTIFICATIONS

AWS Certified Cloud Practitioner | Certified Scrum Developer
